Microsoft Exchange
Connector*
- *Enterprise Report
Management*
- *Enhanced Email Alerts*
- *Enterprise Web
Services*
- *XML Bulk Load
Utilities*
- *Course Keys*

- ✓ Easy installation into Microsoft Windows Server 2008 or 2012 with SQL Server 2008 or 2012 environment
- ✓ Single sign-on with Windows Authentication and/or Authentication Web Service
- ✓ Access individual portions of the application through SharePoint Web Parts
- ✓ Launch, track, and manage online courses as well as in-person seminars, classes, and more
- ✓ Integrate with 3rd-party applications via Web Services API
- ✓ Automated email alerts keep users up-to-date
- ✓ Add-ons and Collections provide additional functionality as needed
- ✓ Customizable user interface via images, stylesheet, text editors, and custom links

Learning Management System for .NET and SharePoint

LearningServer is a highly flexible and customizable eLearning software application. With a variety of licensing/implementation options, support for numerous languages, and the scalability of the Microsoft .NET environment, LearningServer is a perfect fit for organizations of any size. The beauty of LearningServer lies in its modular feature-set and the familiar Microsoft Office-like look/feel. This provides a shallow learning curve and eliminates unnecessary distractions - maximizing users' time participating in or managing learning. LearningServer is deployable in Microsoft SharePoint, further increasing adoption and familiarity for users.

software

Standard Features

Out of the box, LearningServer meets and exceeds all of the features you would expect to see in a Learning Management System - course (SCORM/AICC), event (classroom/online), user, and enrollment management, automated email alerts, reports, gradebooks, and more. When deployed in Microsoft SharePoint, numerous LearningServer web parts can be imported into your SharePoint sites/pages.

Extensibility

“Collections” provide your organization with the opportunity to extend the capabilities of LearningServer and your 3rd-party courses on an “as-needed” basis. Each of the four Collections offer a variety of incremental functionality such as Threaded Discussion/Chat (Collaboration), Course Assembler/Exams/Surveys (Content Management), Job Grouping (Career Development), and eCommerce/multi-site management (Enhanced Management). In addition to the Collections, functionality extensions such as Enhanced Email Alerts, Custom Report Management, and Web Service packs can be purchased individually.

Implementation/Integration/Technologies

LearningServer can be installed and fully functional in a matter of hours via an automated installation process. Built on Microsoft .NET and optimized for SQL Server and Windows Server, LearningServer can be deployed on various server setups to meet your organization’s user-volume requirements. Active Directory Authentication, Web Service APIs, XML Bulk Load, and the use of Router (external authentication into LearningServer) provide the tools to integrate with 3rd-party applications.
